

Climate Change

While we haven't set a specific target date for achieving carbon neutrality in terms of greenhouse gases at ATMU, our efforts to study and combat climate change persist annually. These and other factors will be taken into account in ATMU's new campus, which is planned and currently being worked on. We will recognize the importance of customizing our approach to reach specific target groups, ensuring a deeper understanding of climate change, its scientific underpinnings, implications, and effective coping mechanisms.
